

Use Case Diagram

Three use case diagrams follow. They are for the high, medium, and low-importance levels.

These are the high importance level use cases. The following use cases are examples of how users, such as employees and members of the KHBPA, will interact with the proposed system to perform activities. Use case diagrams show the actors involved in the previously stated use cases and their connections to the use cases. If an actor, the stick people to the side, are connected to a use case a line is drawn indicating so. These are constructed as detailed, essential use case descriptions in a form format. Use cases are modeled after the system requirements and are what was desired by the KHBPA.

These are the medium importance level use cases. The following use cases are examples of how users, such as employees and members of the KHBPA, will interact with the proposed system to perform activities. Use case diagrams show the actors involved in the previously stated use cases and their connections to the use cases. If an actor, the stick people to the side, are connected to a use case a line is drawn indicating so. These are constructed as detailed, essential use case descriptions in a form format. Use cases are modeled after the system requirements and are what was desired by the KHBPA.

These are the low importance level use cases. The following use cases are examples of how users, such as employees and members of the KHBPA, will interact with the proposed system to perform activities. Use case diagrams show the actors involved in the previously stated use cases and their connections to the use cases. If an actor, the stick people to the side, are connected to a use case a line is drawn indicating so. These are constructed as detailed, essential use case descriptions in a form format. Use cases are modeled after the system requirements and are what was desired by the KHBPA.
